1. **Safety precautions**
   - Use supply voltage and interfaces indicated in the system specifications.
   - In connection/disconnection of cables, the system power must be switched off.
   - Do not use the system in locations close to powerful light sources.
   - The system must be grounded.

2. **CE compliance**
   The system has been developed for use in industry and meets the requirements of the following Directives:
   - EU directive 2014/30/EU. Electromagnetic compatibility (EMC).

3. **Laser safety**
   The sensors make use of c.w. 660 nm wavelength semiconductor lasers. Maximum output power is 1 mW. The system belongs to the 2 laser safety class according to IEC/EN 60825-1:2014. The following warning label is placed on the system body:
   
   ![Laser Safety Warning Label]

   The following safety measures should be taken while operating the system:
   - Do not target a laser beam to humans.
   - Avoid staring into a laser beam.
   - Do not disassemble the system.

4. **General information**
   The system is designed for non-contact measuring of inner diameter of cylindrical and taper pipes, gun barrels. The system is used on the production line as the quality control tool.
5. Basic technical data

<table>
<thead>
<tr>
<th>Parameter</th>

</thead>
<tbody>
<tr>
<td>Dmin</td>
<td>Minimum measurement diameter, mm</td>
</tr>
<tr>
<td>Dmax</td>
<td>Maximum measurement diameter, mm</td>
</tr>
</tbody>
</table>

Example: RF040-65/115 – Multisensor Inner Diameter Measurement System RF040, measurement range - 65...115 mm

7. Structure and operational principle

Operation of the system is based on the hole surface coordinates measurement by point laser triangulation sensors.

The system contains 3-6 point laser triangulation sensors located circumferentially in one housing at known fixed angles (see Figure 1).

Figure 1. The system with six laser sensors
The system operates as follows.
The measurement system is inserted into the pipe and moved by translation module to the definite position. Laser sensors measure distances to the inner surface. Software calculates inner diameter of the pipe.
Overall and mounting dimensions are shown in Figure 2.

8. **Overall demands for mounting**

The system is positioned so that the object under control has to be placed within the working range of the system.

ATTENTION!
The system must be grounded – static electricity may cause the failure of electronic components.

9. **Cables**

9.1. **Power cable**

10. Network setting

All systems are shipped with the following default network configuration: IP address of the system – 192.168.0.3.

Configure your PC’s network card in the following address space: 192.168.0.X. Connect system directly to PC or through network switch.

11. Indended use

11.1. Preparation for use

The preparation involves the following steps:

- Visual inspection.
- Installation and connection.
- Switching the system.
- Calibration.
11.1.1. Visual inspection

- Check the system for completeness and absence of damage.
- Check the cables and ground wire.
- Check the condition of output windows and, if necessary, wipe them with a soft cloth.

11.1.2. Installation and connection

- Install the system on a robot or linear translation module (NOTE: as an option, the system can be fixed and the robot sets the object in control position).
- Make electrical connections (see Par. 9).

11.1.3. Switching the system

Feed power to the system – 9…36 V.

11.1.4. Calibration

Calibrate the system according to Par. 12.4.2.
The system has to be calibrated only once, there is no need to repeat the calibration process.

11.2. Operating the system

The measurement process is fully automated and operation of the system is reduced to the work with the software.

12. Service software

12.1. General information

The service software is intended for:
- Testing and demonstration of the work of the system.
- Setting parameters.
- Calibration.
The service software includes:
- SDK library.
- RF040 Test Program.

12.2. System requirements

- Operating system Windows 7 and later.
- Microsoft Visual C++ Runtime Redistributable for Windows 64-bit. Shipped with the package (you need to run vcredist_x64.exe).

12.3. SDK library

<table>
<thead>
<tr>
<th>File</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>rf040.dll</td>
<td>Dynamic-link library.</td>
</tr>
<tr>
<td>rf040.h</td>
<td>C header file. Refer to this file to understand the SDK functions. There is the detailed description for each of them.</td>
</tr>
<tr>
<td>rf040.lib</td>
<td>LIB file to link DLL to the project.</td>
</tr>
</tbody>
</table>
SDK usage scenario:

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Call <code>connect()</code> to connect to the system.</td>
</tr>
<tr>
<td>2</td>
<td>Call <code>switchSensor(true)</code> to switch on the system.</td>
</tr>
<tr>
<td>3</td>
<td>Call <code>calibrate()</code> to run the calibration, or <code>getCalibratedMeasures()</code> to get calibration data.</td>
</tr>
<tr>
<td>4</td>
<td>Call <code>getMeasures(result_array)</code> to run the measurement process.</td>
</tr>
<tr>
<td>5</td>
<td>Call <code>switchSensor(off)</code> to switch off the system - optional.</td>
</tr>
<tr>
<td>6</td>
<td>Call <code>disconnect()</code> to disconnect from the system - optional, called from destructor.</td>
</tr>
</tbody>
</table>

12.4. **RF040 Test Program**

12.4.1. **Connection**

When you start the program, it searches for devices connected. If the network settings of your PC are correct, the program will establish connection with the system.

12.4.2. **Calibration**

It is necessary to calibrate the system before you start the measurement process. The system has to be calibrated only once, there is no need to repeat the calibration process.

The system is calibrated using the calibration ring, the diameter of which is set programmatically by the "param D0" parameter.

When you see the message "Place ring #0 and press enter", place the calibration ring and press the Enter key in order to start the calibration process.

The calibration is performed for 10 positions. So, it's necessary to press the Enter key 10 times and to change the position of the calibration ring every time before you press the Enter key.

**NOTE.** The distance from the calibration ring inner surface to the system housing must not be less than 6 mm.
12.4.3. Measurement

When the system is calibrated, you can start the measurement process. Press the Enter key in order to perform the measurement. The program will show the calculated values:

![Image](image.png)

13. Warranty policy

Warranty assurance for the Multisensor Inner Diameter Measurement System RF040-65/115 Series – 24 months from the date of putting in operation; warranty shelf-life – 12 months.

14. List of changes
